DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 12, 13, 16, 17, 21 and 25, drawn to a device for controlling fluid flow in a microchannel, classified in class 204, subclass 601.
 - II. Claims 5-10, 11 and 22-24, drawn to a method for making a mobile, monolithic polymer element in a microchannel, classified in class 525, subclass 50.
 - III. Claims 14 and 15, drawn to a rotational flowmeter, classified in class 73, subclass 253.
 - IV. Claims 18-20, drawn to a method for shaping a monolithic polymer element disposed within a microchannel, classified in class 525, subclass 50.
2. Inventions I and that of II and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process. Processes such as etching or molding can make the monolithic polymer element.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Inventions III and that of I, II and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the device for controlling fluid flow and the method for making the device does not require a flowmeter for its operation. The subcombination has separate utility such as measuring any fluid flow such as Coriolis, turbine and vortex.

5. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Groups I, II and IV, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Tim Evans on February to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2855

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
